Compact 2

Optimal use of house surface with Compact 2 aviary system

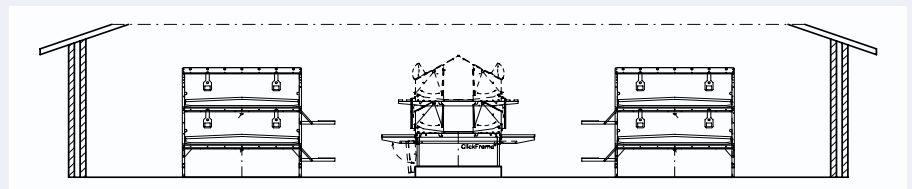

Benefits

The Compact 2 aviary offers many benefits:

- ✓ Optimal use of house surface area
- ✓ Solid construction
- ✓ Long lifetime

About Compact 2

By adding a Compact 2 aviary to the existing equipment of nests and slats the available living space can be increased. This will mean more eggs produced in the same house floor area.

Scratch behaviour expressed on tiers

The Compact 2 aviary system has a solid and practical construction with a long lifetime. The system is standard equipped with TwinWorld slats which offers the following benefits:

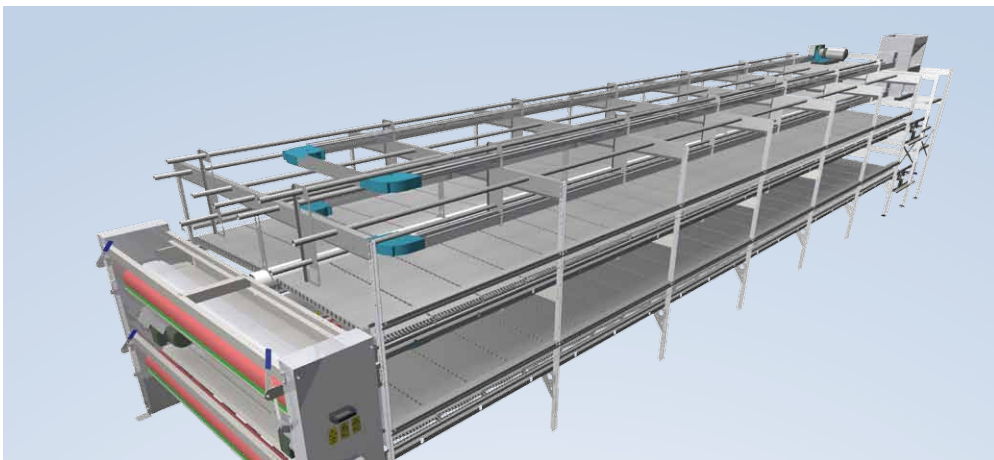

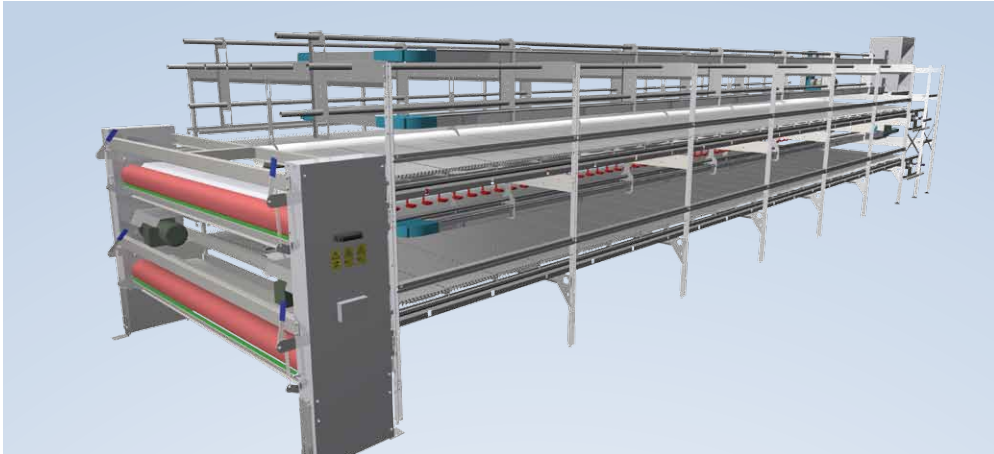

- An open structure and minimal contact points thus less dirt accumulation and mite unfriendly
- An integrated air manure drying tube which is kept clean by the hens themselves due to the round construction which also enhances optimal air drying
- Integrated egg tray covered by an egg protection profile along the edge so that any system eggs can roll into the tray from the sloped floor

The Compact 2 system can be applied in various configurations. Feeding and watering systems can be added to any tier, if so desired. Each system is equipped with perches which allows the birds to express their natural behaviour.
