VolMaxx®

Good overview of the hens and optimal conditions for checking and system maintenance

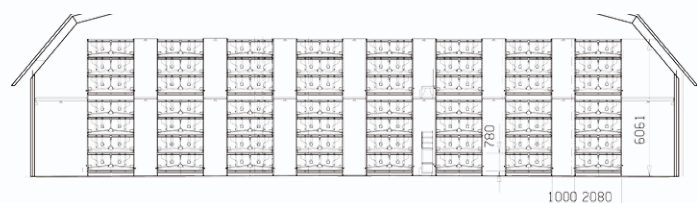

Benefits

With the Volmaxx “mini aviary” you can benefit from the following advantages:

- ✓ Better egg quality because of a laying nest with an integrated nest mat
- ✓ Optimal use of house floor area because the egg belts and feed system have been located inside the Volmaxx system
- ✓ Easier catching of the hens because of partitions in the middle of the system
- ✓ Doors easily fold open with one hand
- ✓ Complies with the EU and KAT standards
- ✓ Solid construction

About the VolMaxx®

The Volmaxx® “mini aviary” allows for a good observation of the hens and also ensures optimal conditions for checking and maintenance of the system. Because of the unique dimensions of the system the number of hens can be optimized in the house, because less space for alley ways is required. The nests, which are situated on the left and right side of the VolMaxx® system, offer the hens a trusted environment so that the hens can lay their eggs in quiet and comfortable surroundings. Because of the placement of the nests, the roll-out distance of the eggs in the nests is minimal. The eggs roll immediately onto the egg belt, which has been integrated in the system.

Space and comfort

The feed trough is accessible to the hens from both sides, resulting in the optimal use of available feeder space and minimal feed wastage. Because the feed trough is located inside the system maximum use can be made of the alley-ways between the system rows. The VolMaxx® conforms to the European Animal Welfare laws and has therefore several perches for the optimal comfort of the hens. The system is available with a height ranging from 2 to 9 tiers.

VolMaxx®

Good overview of the hens and optimal conditions for checking and system maintenance

A VolMaxx® unit consists of

- 4 fold-away wire doors
- 2 woven nylon egg belts with a width of 120 mm (4.7")
- 2 laying nests with integrated nest mats
- 1 scratch mat (possibility for feed drop on the scratch mat)
- 2 (NL-KAT) or 3 (EU) perches (15cm/layer)
- 2 feeder lines with a perch
- 1 nipple line with 10 nipples (12 nipples is optional)
- 1 solid cross partition on sheets of 3.576 mm
- 1 wire lengthwise partition in the middle of the system

Options

- Manure belt drying tubes
- Cat walks
- LED lighting in cage
- Shocktube along the system
- Various Possibilities for egg transport

Number of hens per unit

| | |
|--------------|--|
| EU-standard | 94 (750 cm ² /hen) (116 sq inches) |
| KAT-standard | 78 (890 cm ² /hen) (137 sq inches) |

Dimensions of a VolMaxx® unit

| | |
|--------|---------|
| Length | 3.576 m |
| Width | 2.080 m |
